

Ranit Naskar

Aspiring Full-Stack Developer

ranitnaskar09032007@gmail.com · Kolkata, India · <https://github.com/R4NiTeXe> · <https://www.linkedin.com/in/ranit-naskar> · <https://ranitnaskar.me>

SUMMARY

Diploma in Computer Science & Engineering student focused on building modern web applications and developing my full-stack skills. I like designing systems end-to-end — from the API layer to the pixels on screen.

PROJECTS

Video-Tube

Enterprise-grade full-stack video platform

A production-ready, highly scalable video-sharing platform with adaptive bitrate streaming, real-time telemetry, and a heavily optimized caching layer. Runs on free tiers today — the architecture is built to scale on paid infrastructure.

Next.js · Node.js · Express · MongoDB · Redis · Cloudinary · Zustand · React Query · hls.js

[GitHub](#) · [Live demo](#)

Dukaan Sathi

with Pritam Maji

AI-powered billing & business intelligence for local Indian shops

Speak a customer's purchase in Bengali, Hindi or English — AI turns it into a structured bill in seconds. Built with a real-time analytics dashboard, an AI business advisor, and full inventory and customer management.

Next.js · Node.js · Express · MongoDB · Google Gemini · Cloudinary · Tailwind CSS · Recharts · Framer Motion

SKILLS

Frontend: React / Next.js, TypeScript, Tailwind CSS, Framer Motion, TanStack Query, Zustand, hls.js, Recharts

Backend: Node.js / Express, JWT Authentication, Zod Validation, Server-Sent Events, Rate Limiting

Database: MongoDB + Mongoose, Redis

Tools: Git / GitHub, Docker, Cloudinary, Google Gemini API, Vercel / Render

JOURNEY

Starting point — Web foundations: Learned the core of the web — HTML, CSS and JavaScript — and how browsers, servers and HTTP actually fit together.

Building up — Full-stack learning: Moved into the MERN world: React, Next.js, Node.js, Express and MongoDB — and the engineering patterns that hold them together.

2024–now — Real-world projects: Designed and shipped two real products: Video-Tube, a streaming platform with Redis-backed caching, and Dukaan Sathi, an AI billing platform in Bengali, Hindi and English.

Now — Current development: Deepening skills in TypeScript, distributed caching, and production engineering — while building this portfolio as a product.

Next — Future professional development: Heading toward internships and junior full-stack roles where I can build real products with real users at scale.

EDUCATION

Diploma in Computer Science & Engineering — Brainware University (2024–2027)
